

Press Release – 23rd January 2008

Garland Partners showcase Remote Media's web-based Digital Signage Platforms with Teracue's real-time MPEG-2/H.264 encoders and DVB videogateways

Garland Partners, Remote Media and Teracue are pleased to announce their collaboration in bringing together complimentary technologies to enhance the Digital Signage experience!

Using the award-winning "signagelive" platform from Remote Media, gives the ability to create date and time specific playlists of numerous types of digital media content that can then be installed across multiple sites, managed from a standard internet browser anywhere in the world. There are no capital costs, just a simple cost per month per connected signagelive device.

Garland Partners have worked with Remote Media to integrate Teracue's ENC-100/ENC-200 real-time MPEG-2/H.264 encoders, to feed live video or the output from a digital set top box and convert this to an IP stream to be incorporated into the signagelive scheduling system. This can also be extended to a live TV feed from digital satellite, terrestrial or cable by using Teracue's DVB-100 videogateway cards and then simply adding this to an existing play-list.

By working closely together the three companies can boast a simple, stable, cost-effective live-content Digital Signage platform that is scaleable to deliver the right message to any number of end-points.

To see signagelive and Teracue's integration come to the following shows:

- **ISE Amsterdam RAI**, 29-31 Jan 08 – Remote Media stand Q154 and Teracue stand O149, both in Hall 7
- **Broadcast Live/Video Forum**, Earls Court 30 Jan-1 Feb 08 – Garland Partners stand K42
- **Screen Expo**, National Hall, Olympia, London 5-6 Feb 08 – Remote Media stand D03

About Garland Partners Limited

Garland Partners Limited (GPL) is an expanding U.K. company working with several leading suppliers of digital video streaming and IPTV solutions to deliver professional end-to-end systems for many applications including internet TV, mobile TV, IPTV, and broadcast services. The company focuses on meeting customers' system requirements, providing a full package of technical and commercial support with the best available products. Customers range in size and application, and GPL's strength is its flexibility in matching the right technology to client needs.

About Teracue AG - IPTV Systems

Teracue supplies IPTV product components that allow high quality video transmission and distribution over LAN and intranet networks. Live streaming and video-on-demand – for digital corporate television and video monitoring, for example – can be achieved with a broad selection of encoders, decoders, videogateways and streaming servers.

Teracue delivers IPTV building-block products for system integration: the individual product components can be combined and scaled to suit most video-networking applications. Our most important customers include: broadcasters, banks, universities, clinics, fire and police centres, aerospace companies, military and other federal government facilities.
